

# DRAWING AND SHADING *FORM* WITH SINGLE POINT LIGHTING

1. Draw 5 forms in two point perspective.

2. Draw an arrow from different directions next to each form to show the direction of the light source. Draw the cast *shadow* directly opposite each arrow.

3. Using black charcoal, shade all of the cast shadows very dark. The area closest to the arrows will be the lightest so tint them with white charcoal. The shape will get gradually darker away from the arrow.
